

AASHISH SACHDEVA

+91 7973322998 | ashisach001@gmail.com | [LinkedIn](#) | [GitHub](#) | [Portfolio](#)

SKILLS

- **Programming Languages:** JavaScript, C++, Python, Java
- **Frameworks & Libraries:** MERN, Next.js, Flask, TailwindCSS
- **AI/LLM:** LangChain, RAG Pipelines, Vector Databases, Prompt Engineering, AI Agents
- **Databases:** MySQL, MongoDB, Redis
- **DevOps & Cloud:** AWS Cloud Practitioner, GCP, CI/CD (GitHub Actions), Docker, Linux, Git
- **Software Engineering:** Data Structures & Algorithms, Object-Oriented Design (OOD), Design Patterns, SOLID Principles, REST APIs, System Design, Distributed Systems, Multithreading, Unit Testing

EDUCATION

- B.Tech in Computer Science, Punjab Engineering College, Chandigarh (Aug 2023 – May 2027)
- CGPA: 7.29/10

EXPERIENCE

Software Developer Intern - NatWest Group

May 2026 - July 2026

- Developed a reusable XML reporting utility integrated across 8 internal projects, automating report parsing and publishing metrics to Grafana via OTLP.
- Eliminated 100% of manual XML parsing by building an end-to-end automated reporting workflow.
- Built Grafana dashboards showcasing 6 quality KPIs and 4 execution trends, enabling developers and stakeholders to monitor test health and performance.
- Developed UiPath automation workflows to streamline report processing and improve testing observability.

AI/ML Research Intern — CSIR-CSIO

January 2026 - May 2026

- Built ML-assisted terrain analysis pipelines for paleo-base identification and geological reconstruction using Digital Elevation Models (DEMs).
- Combined Random Forest classifiers and CNN architectures in MATLAB with TopoToolbox for automated feature extraction and terrain segmentation.
- Improved processing efficiency and reduced manual intervention through automated geospatial reconstruction workflows.
- Worked on scientific computing, spatial data analysis, and AI-driven geological modeling in a research environment.

Full Stack Web Developer Intern - Growero.io

May 2025 - August 2025

- Applied software engineering principles to optimize async API calls, improving reliability and scalability of the system.
- Resolved UI performance bottlenecks, decreasing initial page load time by 40%.
- Developed and debugged secure SSO & email/password authentication flows.
- Led CI/CD integration with GitHub Actions, automating continuous integration and testing, reducing release cycles by 25%.

PROJECTS

AI COO: Autonomous AI Operations Assistant

- Built an AI-powered operational copilot that converts unstructured founder/manager instructions into structured tasks, workflows, and execution plans for teams.
- Integrated LLM-based task decomposition, meeting coordination, calendar scheduling, and MCP/tool-calling workflows to automate operational management.
- Designed feedback-loop systems for task tracking, employee updates, and adaptive workflow refinement based on execution outcomes.

Distributed Cache: High-Performance In-Memory Caching System

- Built a distributed in-memory cache using C++, Redis, multithreading, and consistent hashing, handling 50K+ requests/min with sub-15 ms latency and 42% higher cache hit rate.
- Designed a horizontally scalable sharded architecture with REST APIs, LRU eviction, and TTL expiration, reducing backend database queries by 65%.
- Containerized cache nodes using Docker on Linux, achieving 3× higher throughput, 40% lower response time, and 99.9% service availability under concurrent workloads.

ACHIEVEMENTS

- Solved 450+ DSA problems on LeetCode (focus: DP, Graphs, and System Design)
- Top 5% in #T20DSACHallenge (June & July 2025)

CERTIFICATIONS

- Cloud Computing — GDSC PEC
- Software Engineer Certificate — HackerRank
